

# May 3 ContextCore Update

What are the major systems?

Humors  
Mimics  
Prisms/Focus

Memory Management  
Memory Import/Export

Context Store DB  
Elements  
Sub-Elements  
Shards

Personality  
(Akasha)

↓ ↓ ↓  
Prompt engineering  
to make personalities  
& import/export them

Memory Capture  
(Echo Forge)

↓ ↓ ↓ ↓  
Can import/export memories  
from different providers.  
Can also import/export  
Manually. Will create  
Integrations to other data sources  
later

Ontology & Data  
Capture  
(Context Store)

↓ ↓ ↓ ↓  
Store data in a mongo  
DB. Tag them with auto-  
generated Element from a  
pre-defined list of elements.  
↓ ↓ ↓  
Auto-generate Shards that are  
very specific tags. They will be  
unique.

RAG Pipeline  
Context Store  
Echo Forge

MultiQuery  
Chat Manager  
Element Manager  
Memory Manager

Memory Retrieval

(Context Weave)

Contains the engine that will  
allow users to inject Context  
from all their data.

↓ ↓ ↓

UPDATE MAY 4

→ Need "RAM CONTROLLER"  
to read metadata and  
select subsets to inject

User Interface

- MultiQuery: Can prompt multiple LLMs
- Element Manager: Toggle elements
- Memory Manager: Allow import & export  
of memories into structured data
